

## Portfolio Commentary

Arabesque Systematic returned -2.54% for the month, compared to -5.84% for the MSCI All Country World Index.

On a sector level especially Electronic Technology, Technology Services and Finance contributed negatively to performance. Utilities, Industrial Services and Consumer Durables contributed positively. On a relative basis the main driver of May's outperformance was positive stock selection in Technology Services and the overweight in Utilities. The cash allocation (on average 13.4% in May) had a positive effect. With low turnover the fund increased its cash position to around 17%. The largest exposures are the cash allocation, overweights in Technology Services and Utilities and an underweight in Finance.

The fund has returned 34.9% since inception with a volatility of 10.1%.

## Sustainable and Quantitative

Arabesque follows a quantitative investment approach that integrates sustainability data with financial analysis.

Arabesque Systematic is a balanced global equity fund that allocates daily between equity and cash and integrates performance-oriented sustainability data into its stock selection process. The fund's sustainable equity universe consists of around 3,000 individual stocks that have passed a rules-based screening process. The portfolio of stocks is constructed using a quantitative trend following model as well as fundamental and earnings analysis.

The fund provides risk-controlled equity upside by dynamically allocating into stocks from the sustainable equity universe and cash. The equity exposure can be between 0 and 100%. The fund aims to limit maximum drawdowns to less than 25%.

## Investment Process

- The Arabesque sustainable equity universe has approximately 3,000 stocks screened via a multi-stage selection process based on Arabesque S-Ray®.
- Arabesque S-Ray® is designed to streamline vast amounts of ESG data, and can be used in three unique ways to evaluate companies: (1) GC Score: an assessment of each company based on the normative principles of the United Nations Global Compact. (2) ESG Score: a sector specific analysis of each company's performance on material ESG issues. (3) Preferences Filter: an optional process to examine business involvements against individual investor values.
- From the Arabesque sustainable equity universe, a quantitative investment model selects equities that have been trending upwards. The weight of each stock in the portfolio is approximately 1%. An active risk management process is used to dynamically allocate between equities and cash.
- The fund does not use derivatives, leverage nor shorting.

## Opportunities

- Potential of high risk-adjusted returns.
- Exposure to stocks that have been screened for their Environmental and Social impact as well as their Governance practices.
- Risk reduction through an active risk management process that dynamically allocates capital between equities and cash.

## Risks

- Exposure to market-related price fluctuations and losses.
- Exchange rate risks in the equity and cash holdings.
- The value of the fund shares may fall below the price at which the investor acquired the shares.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Arabesque SICAV – Arabesque Systematic (USD) was rated against the following numbers of USD Flexible Allocation funds over the following time periods: 299 funds in the last three years. Past performance is no guarantee of future results. Morningstar Rating is for the Arabesque SICAV – Arabesque Systematic (USD) share class only; other classes may have different performance characteristics.
